

# Non-household return to sewer allowance policy

This policy document sets out the criteria in which a non-household customer can apply for a return to sewer allowance via their selected retailer. The retailer should request an allowance using process H1 of the Operational Terms.

Wessex Water's return to sewer allowance policy is fully compliant with the RWG Good Practice Guide which has been created to provide a consistent and collaborative approach within the market. This document outlines the addendums to our policy in more detail.

## Default allowance

Our return to sewer allowance is a fixed value of 95%.

- 1 Allowances are only given for continued reductions in the volume of sewage returned to our network that is below the default allowance.

Applications for one-off reductions, for example dry summers or filling domestic swimming pools, will not be awarded.

- 1.1 An allowance will only be given where the customer is able to show that when taking one year with another, consistently less than 95% of the recorded water supply consumption is returned to sewer as foul water.

- 1.2 Evidence of usage is required to calculate any allowance and should be in the form of sub meter readings.

Where sub metering is agreed by us as not feasible, an application using a water balance will be a suitable alternative. This should include a full breakdown of the premise use, number of employees if applicable and volumes used for production or usage (eg, sprinkler systems). This should be presented in a spreadsheet with clear calculations.

- 1.3 The allowance will be backdated to 1 April of the current financial year or to the date of new occupancy, whichever is the most recent.
- 1.4 Allowances will be reviewed periodically in addition to occupancy changes and notified changes of use.
